Charnpreet Singh

From the Desk of the Director

TPS Pest Control is service providing company, that offers wide range of pest control for homes, offices, factories, hotel, hospital etc.

As an innovative service by research we have found many proven solutions for various pests such as termite, bedbug, rodent, cockroach, house fly, lizard, corona virus and etc. Even During the Covid 19 pandemic we ensured that the houses are sanitized in best possible way.

We want to provide a pest free experience environment where people enjoy the benefits of service provided by us. We are working hard to strengthen our domestic business, improve the relationship with our franchise and ensure that all resources are allocated optimally. Our service have been used by many clients and tested and approved by the government of India.

We Are Moving Forward with an Aim.

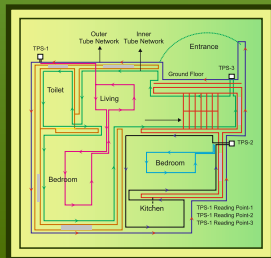

"The Quality First, The Customer Supreme"

Termiticide Distribution System Layout for Anti Termite

What is Anti Termite Pipe Reticulation System?

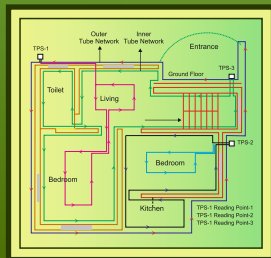

Termite Treatment through piping method/termite tubing system also known as Pipe Reticulation system is a revolutionary system designed to effectively treat the area under concrete slabs or before flooring is done. It is system which is replaceable unlike older termite treatment methods. The reticulation system is a network of underground specially designed pipes (rubberised membrane) to induce anti-termite chemical uniformly throughout your Building's foundations. Regulating the chemical flow, this system helps to protect against invasion by termites in future which would otherwise enter from the outside of your home or from under the floor. We recommend Termite Reticulation System for Anti Termite Treatment because it is extremely durable and gives a very robust protection to a new building and works as a highly effective termite shield for years together. Our Anti Termite Reticulation System is being widely used in Indian construction industry including new homes, offices and other commercial buildings.

How it Works?

It involves laying of special flexible, continuously perforated 14 mm dia pipe along the internal periphery of the building and centre of the flooring using grid design. This placement of perforated pipes (made of rubberised membrane) is done along the flooring just before laying of the sand bed/sub grade or before fixing the floor marble/tiles. This perforated pipe has emitters fabricated in them which allows uniform distribution of termiticide under the entire flooring. These emitters distribute chemical at a pre calculated rate, and reduces the risk of any area being untreated. Use of continuously perforated porous pipe ensures no debris, clay or concrete will block the pipe and make it ineffective. The pipe structure pushes the substrate aside and prevents clogging.

Pipe Reticulation System or Piping Treatment for Anti Termite Treatment. Porous Pipe Treatment

In this treatment, our team of expert fit the pipe to the raw soil. Firstly our Team covers all the inside corners of the pith beam. Then, cover the centre Area of the pith beam. They create a Junction to refill water-based chemicals Emulsion on it. Its cover is near the pipe in an area of 6 inches.

The Advantages of Termite Reticulation Treatment Area as Under :-

1. No excavation or drilling of holes in floor to inject termite Chemical is required.
2. Tedious work of removing the furniture in the area is not required.
3. No pungent smell of the termite chemical is released in the premises.
4. No exposure of insecticides to occupants of the building.
5. Installation of piping system is warranted for 10 years.
6. No Stains discolouring or marks on the costly floors.
7. Unlike conventional termite injection method there is even Distribution of the chemical under the floor.

"Premium Class Service with Affordable Price"

Why Us. :

The only Company in India that Complies with

ALL BIS STANDARDS

(BUREAU OF INDIA STANDARDS)

Chemicals used by TPS Pest Control with Company Details are as Follows :-

	Chemical	Relevant Indian Standard	Concentration By Weight Percent (Active Ingredient)
1.	Imidacloprid 30.50% SC	****	0.075
2.	Fipronil 2.92% W/W EC	****	0.075
3.	Bifenthrin 2.5% EC	IS 8944	1.0
4.	Chlorpyrihos 20% EC	IS 8944	1.0
5.	Lindane 20% EC ++	IS 632	1.0
